

Enhanced Software Incorporates Anti-fraud Feature

Ignify eCommerce now includes advanced "heuristic anti-fraud" features that patterns customer buying habits and support both credit card encryption and the "Verified by Visa" standard. This capability is said to guarantee only authorized credit card transactions and enforce a second level of password-protection for online purchases. In addition to strengthened security, the solution is designed to streamline the shipping process by working with all major domestic carrier systems, including FedEx, UPS, DHL, and the USPS.
